## SUBJECT: IDENTIFICATION AND CURE DATING OF RUBBER PRODUCTS.

**PURPOSE:** Please let this Service Information Letter clarify the “identification” and “cure dating” of rubber products.

The material of rubber products is identified by the following colors:

Color	Material	Part Type
Red	Flourosilicone	Diaphragms, seals, and O-rings
Blue	Flourosilicone	Seals and O-rings
Black (See Note)	Buna N or Flourocarbon	O-rings

**NOTE:** The material for the following 2 (two) parts is Flourocarbon.

953541-8 O-ring, Fuel Enrichment Adjuster

953541-10 O-ring, Fuel Inlet Screen

All other black o-rings are made from Buna-N and are used only with shipping caps and plugs.

Please let the following clarify Precision’s policy in regards to “cure dating” of rubber products:

Precision Airmotive does not “cure date” rubber products for the commercial market. Some of our products have “manufacture” or “cure “ dates on them, but these dates are primarily for internal use. Please note that the dates printed on these parts or label is not an indication of the life of those parts. All rubber products manufactured by Precision Airmotive have an unlimited shelf life. If the parts are stored properly in their original packaging, in a cool, dry place away from direct sunlight, and are used as directed by the applicable Precision Airmotive maintenance manual, the shelf life is unlimited.

If a “cure date” is required to meet requirements imposed by the customer, we can provide one. In order to do this, the “cure date” requirement must be stated at that time the rubber products are ordered. Precision will add a handling fee for each part number ordered.

All of our parts are subject to warranty consideration should any discrepancies be discovered at your receiving inspection. Please don’t hesitate to contact us if there is ever a question regarding the quality or fitness of a part.
